

Mohomed Faiz Ahmed Ifhaam

Consultant Senior Engineer · .NET · Angular · AI-Augmented Developer

ahmedifhaam1@gmail.com · +94 77 669 9609 · linkedin.com/in/ahmedifhaam · github.com/ahmedifhaam

PROFESSIONAL SUMMARY

Consultant Senior Engineer with full-stack experience across .NET, Angular, software architecture, performance engineering and AI-augmented developer workflows. Known for independently diagnosing complex technical problems, designing practical solutions across application layers, and turning them into reusable engineering patterns.

EXPERIENCE

Arcadea (AgCode)

May 2024 — Present

Consultant Senior Software Engineer → Consultant Senior Engineer

- Developed a structured AI-augmented engineering workflow spanning requirements, specification, planning, ATDD-oriented implementation, testing, verification scenarios, code review and PR refinement; separately built a SonarQube remediation workflow that eliminated approximately five developers spending one day per week on recurring issue fixing.
- Diagnosed a backend data-integrity issue spanning multiple services by tracing logs and debugging execution flow, then redesigned data retrieval and processing to eliminate repeated database work and correctly handle linked records.
- Reworked backend persistence and repository architecture, replacing destructive save patterns with scoped upsert/orphan handling and introducing a reusable repository execution abstraction for transaction/retry handling.
- Reworked Angular rendering and data-loading architecture after identifying excessive DOM updates from API-driven processing loops, using virtual scrolling, lazy loading, caching and reusable components; a screen that became unresponsive around ~1,000 cards could subsequently support 100,000+ cards.
- Independently implemented the final two new features end-to-end across frontend and backend layers, enabling continued feature development in the legacy system.
- Designed and implemented a reusable .NET MAUI page/navigation architecture from scratch, supporting multi-pane content, stacked pages and layered drawers; it became the standard application navigation foundation outside the login flow.

Nagarro

Mar 2022 — May 2024

Senior Software Engineer → Associate Staff Engineer

- Developed backend functionality for a document-based Gen AI chatbot using Clean Architecture and CQRS, with APIs hosted on Azure App Service and integrated with Microsoft Bot Framework for Microsoft Teams.
- Designed RESTful APIs for care-home bed management and contributed to medications management modernization.
- Owned project deliverables, estimation, dependencies and client coordination while working on performance and scalability.
- Mentored engineers, provided architectural guidance and contributed to coding standards.

Zone24x7 (Pvt) Ltd

Jul 2019 — Mar 2022

Software Engineer → Senior Software Engineer

- Designed and developed ASP.NET Core microservices using DDD and CQRS.
- Implemented Just-in-Time and Federated User Provisioning for IdentityServer4.
- Worked with Angular 8/9, NgRx, EF Core, SQL Server, SSIS/SSDT and T-SQL.
- Developed CI pipelines for custom NuGet libraries and APIs and integrated SonarQube analysis.

- Worked on DHIS2 Android applications, Java Spring Boot APIs and AngularJS applications.

OPEN SOURCE

- Apache DRAT — PMC Member.
- Ngx-input-Regulate — author of an Angular library.

TECHNICAL SKILLS

Backend: .NET, ASP.NET Core, EF Core, REST/Web API, Java, Spring Boot	Frontend: Angular, AngularJS, NgRx, RxJS
Architecture: DDD, CQRS, Clean Architecture, MVC, TDD, Microservices, Repository patterns	Mobile: .NET MAUI, Android
Data: SQL Server, T-SQL, SSIS, SSDT, Azure Storage	DevOps/AI: Azure DevOps, Git, CI/CD, SonarQube, Claude, AI-augmented development

EDUCATION & CERTIFICATIONS

B.Sc. Hons in Management and Information Technology
University of Kelaniya, Faculty of Science · 2015–2019

Certifications: Microsoft Certified: Azure Fundamentals (2020) · MCSA: Web Applications (2019) · MCSD: App Builder (2019)
